

From the origins to today, towards the future. With care and vision

# The agronomic manifesto

---

## 01 Sustainable, since 2007

We have eliminated the use of herbicides and since then we have been working daily to achieve a chemical impact close to zero on our vineyards.

## 02 We resort to weeding

We contribute to soil conservation, reducing erosion, preserving the structure, and enhancing fertility.

## 03 We promote the biodiversity of the agricultural ecosystem

We provide a habitat for useful insects, which contribute to the defense of our plants.

## 04 We minimize the use of agricultural vehicles

We avoid the trampling of the ground and the consequent asphyxiation. To reduce CO2 emissions into the atmosphere.

## 05 We monitor the impact on the environment around us

We respectfully live in the territory every day, to take note of the changes underway.

## 06 We act flexibly and adaptively

We can do so thanks to the great experience we have in the agronomic and viticultural world, given by a historical working group, which walks through the same vineyards, observing them, with sensitivity, for more than twenty years.
